We are pleased to share another wonderful rehab success story from:

Advanced Specialty Hospitals of Toledo
1015 Garden Lake Parkway, Toledo Ohio 43614
(419) 381-0037

Brian was originally admitted to St. Charles Hospital on 1/3/2024 with sepsis. He was then intubated for 7 days. Extubation was unsuccessful and required re-intubation. He was then taken to St. Vincent's Hospital and treated for respiratory failure with hypoxia and ultimately required a tracheostomy placement and a feeding tube. Multiple large amounts of sedatives were given to control his behaviors and ability to tolerate the ventilator. He was further stabilized prior to transferring to Advanced Specialty Hospitals of Toledo.

Brian was admitted to ASHOT for ongoing vent weaning, weaning of his IV medications, managing his various medical issues, and providing rehabilitative and restorative care. Nursing staff was able to wean him from his IV medications and respiratory therapy staff weaned him from the ventilator with decannulation. He worked with physical, occupational, and speech therapy to ambulate on his own, complete his daily living tasks independently, and consume an oral diet.

Brian was discharged to home with his family. We are so proud of his hard work and wish him the best of luck. We are so thankful to have been a part of his rehab journey.

Functional Outcome Measures
