We are pleased to share another wonderful rehab success story from:

Advanced Specialty Hospitals of Toledo
1015 Garden Lake Parkway, Toledo Ohio 43614
(419) 381-0037

Eileen was admitted to Advanced Specialty Hospital of Toledo following her admission to The Toledo Hospital due to a boil which progressively worsened and eventually ruptured. In the hospital she experienced nausea, vomiting, tachycardia, and developed necrotizing fasciitis of her wound. Her hospitalization was complicated by multiple debridement's and hyperglycemia. Eileen was medically stabilized and transferred to ASHOT for wound care and increasing overall strength.

Eileen arrived to ASHOT in January of 2024 with decreased mobility, multiple wounds, and increased need for assistance from caregivers. Nursing and wound care staff worked closely to educate her on independently caring for her wounds at home. She worked with our therapy team to gain strength to ambulate with a walker and increase independence with functional ADLs.

Eileen was motivated to get back home with her husband. Her hard work paid off and she was able to meet her goal and discharge home! We wish Eileen the best and are proud of her progress! Thank you for allowing us to be part of your recovery!

Functional Outcome Measures
