We are pleased to share another wonderful rehab success story from:

Advanced Specialty Hospitals of Toledo
1015 Garden Lake Parkway, Toledo Ohio 43614
(419) 381-0037

Eleanor was admitted to The Toledo Hospital on 1/20/2024 with nausea and vomiting. Her CT scan showed a large hernia containing majority of her bowel, and portions of her stomach and transverse sigmoid colon. Her hospitalization was complicated by respiratory failure due to hypoxemia and fluid overload requiring a tracheostomy. He also experienced dysphagia resulting in a modified diet with thickened liquids. She ultimately underwent a Davinci hernia repair prior to her discharge to Advanced Specialty Hospitals of Toledo.

Eleanor was admitted to ASHOT for vent weaning and decreased mobility and overall strength. She worked with our physical, occupational, and speech therapists during her stay and with improved abilities including: ambulating with a walker, completing daily living tasks with decreased assistance, and consuming a regular and thin liquid diet. Our nursing staff and respiratory therapy teams worked to wean her from the ventilator with eventual decannulation and to stabilize her for discharge.

Eleanor was discharged to a skilled nursing facility to continue her therapies with the plan of going back home soon. We wish her the best of luck and are thankful to have been part of her recovery journey.

Functional Outcome Measures
