We are pleased to share another wonderful rehab success story from:

Advanced Specialty Hospitals of Toledo
1015 Garden Lake Parkway, Toledo Ohio 43614
(419) 381-0037

Marvin was admitted to Blanchard Valley Hospital on 1/5/2024 with shortness of breath and coughing since Thanksgiving. He was found to be hypoxic and required intubation. He was also found to have acute bacterial endocarditis of his aortic valve with moderate to severe aortic insufficiency. He underwent a biosynthetic aortic valve replacement and aortic root repair. His stay was complicated by post-operative respiratory failure, multiple intubations, altered mental status, pneumonia, and a GI bleed. He ultimately required a tracheostomy tube and had a feeding tube placed due to a failed swallow study.

Marvin was admitted to Advanced Specialty Hospitals of Toledo for vent weaning and decreased mobility and overall strength. Our nursing and respiratory therapy staff worked with him to wean from the ventilator support with eventual decannulation. He actively participated with physical, occupational, and speech therapy and was able to ambulate with a walker, complete daily living tasks with decreased assistance, and consume an oral diet.

Marvin was discharged to inpatient rehabilitation for continued therapy with plans to discharge home in a couple of weeks. We wish him the best of luck and are thankful to have been chosen to be a part of his journey.

Functional Outcome Measures
