

Advanced Specialty Hospitals of Toledo

We are pleased to share another wonderful rehab success story from:

Advanced Specialty Hospitals of Toledo
1015 Garden Lake Parkway, Toledo Ohio 43614
(419) 381-0037

Sharon Hudson was admitted to the hospital with a rash which was ultimately diagnosed as Stevens-Johnson Syndrome. She was transferred to the ICU with altered mental status. In the ICU, she failed her swallow study and was eventually intubated for airway protection. Following multiple intubation and extubations, she underwent a tracheostomy and had a feeding tube placed. Her stay was complicated by kidney issues and multiple infections including a UTI, pneumonia, and sepsis.

Name:
Sharon H.

Admitting Diagnosis:
Stevens-Johnson Syndrome

LOS:
34 days

Discharge Location:
Inpatient Rehabilitation
communicarehealth.com

Sharon was transferred to Advanced Specialty Hospital for vent weaning and improving mobility and overall strength. Physical, occupational, and speech therapy treated her during her stay with overall improvements including the ability to ambulate with a walker, decrease her need for assistance with daily living tasks, and consume an oral diet. Nursing staff and respiratory therapists worked to wean her from the ventilator and eventually decannulate with no oxygen needs at her time of discharge.

Sharon was discharged to inpatient rehab for continuing therapy services with the plan for going back home in a few weeks. We are so proud of her and thankful to have been chosen to be a part of her recovery.
